Introduction	9
Chapter 1	
General equilibrium theory (GET) – genesis and fundamental concepts.....	11
1.1. Introduction in modelling methodology though general equilibrium techniques	12
1.2. Emergence of general equilibrium theory - L. Walras	18
1.3. The contribution of J. Hicks to the development of the general equilibrium theory	22
1.4. Pareto optimum and the general equilibrium.....	23
1.5. A new definition for general equilibrium: Arrow and Debreu	30
1.6. Other key concepts in the period prior to 1970s.....	35
Chapter 2	
Applied general equilibrium theory.....	37
2.1. Applied general equilibrium models (period after the 1970s).....	39
2.2. Organisation of input data for general equilibrium models.....	43
2.3. Numerical algorithms and software for the applied general equilibrium theory	46
2.4. Models for evaluation of the impact of certain environment protection measures (1980-1990).....	49
2.5. Diversification of general equilibrium models (1980-2000).....	50
2.6. Research directions in general equilibrium theory after 2000.....	54
2.7. Crettez – Fagart model (representative for 2000s).....	56
2.8. Bohringer – Rutherford model (representative for 2000s).....	61
Chapter 3	
Production functions, utility functions and the mixed complementary format	72
3.1. Theoretical aspects regarding production and utility functions	72
3.2. Nested forms of CES type utility and production functions	82

3.3. Agreggated forms of CES type utility and production functions	87
3.4. Complementary formulation of equilibrium conditions.....	89
3.4.1. Complementary mathematic problems.....	90
3.4.2. The connection between the complementary mathematic formulation and the general equilibrium models	93

Chapter 4

Other theoretical justifications regarding

general equilibrium models 97

4.1. The theorem of general equilibrium existance	98
4.2. Justifications related to the stability of general equilibrium	103
4.3. Choosing the informatic solution – GAMS and MPSGE.....	107
4.4. Computation methods for general equilibrium theory	111
4.4.1. The numerical algorithm SLCP.....	112
4.4.2. The numerical algorithm PATH	114

Chapter 5

Proposed model for general equilibrium..... 122

5.1. Model equations	123
5.2. Possible model results	137

Bibliography 139

Abstract 149

Contents..... 151
